

Wptap Vidley Mobile Setup & Usage Instructions

V1.0, Released in January 2011

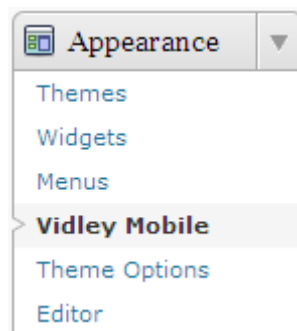

Theme Requirements

- Before you go any further, please make sure you already have WordPress 2.9 or greater installed and configured.
- Press 75's Vidley v1.2.3 installed and configured.

Theme Installation

1. Unzip the installation package and upload the entire '**wptap-vidley**' folder to the WordPress '**~/your site/wp-content/plugins/**' directory on your webserver.
(Please note: It is under the '**plugins**' folder, not the '**themes**' directory)
2. Log in WordPress Admin, navigate to the 'Plugins' tab, and activate the **Vidley Mobile** plugin.
3. Once you have successfully activated the plugin, the '**Vidley Mobile**' settings admin panel will appear under '**Appearance**' tab in your WordPress Admin. Users can manage the following sections in '**Vidley Mobile**' settings admin panel.

Settings in 'Vidley Mobile' admin panel

1. Mobile Devices

In this section, you can see the mobile devices that are supported by WPtap Vidley Mobile. WPtap automatically detects mobile browsers and activates mobile themes. You can exclude certain devices by unchecking the checkbox next to it.

2. Login

Enable Login feature by checking the checkbox to let the login function show at the bottom of your homepage.

3. Categories (Menu)

Select categories to be listed in the Category dropdown list.

4. Pages (Menu)

Select pages to be listed in the Pages dropdown list.

5. Site Logo Section

You can upload your local image file to be used as your site logo. The site logo shows at the upper left corner of your mobile site. (It is the 'Vidley Mobile' image by default). There is no limitation on the type or size of this image file, so you can choose any image that you deem fit.

6. iPhone Desktop Icon

The icon you choose here will appear on the iPhone screen when users bookmark your site. You can also upload your own icon; however, the image file has to be a 57x57px PNG file.

7. Ads Settings

Insert ads by putting your ads code in the **Ads Code** box. You can choose where you'd like the ads to show, **On HomePage, On Pages, On Posts** or on all of them by checking the checkbox. You can also choose the position of the ads, **Top** or **Bottom**.

8. Google Analytics for Mobile Sites Configuration

At here you will set up the Google Analytics for mobile site. Simply copy and paste the code, and upload the ga.php file to your server as indicated.

Support Video Formats (IMPORTANT)

Since currently most mobile devices do not support flash player, Wptap has done quite a job by integrating HTML5 video standards into our plugin/theme. At the moment, Vidley Mobile 1.0 fully supports video formats:

iPhone/iPod Touch: MP4/M4V, YouTube, Vimeo

Android 1.5: YouTube

Android 1.6: MP4, YouTube

Android 2.0+: MP4, YouTube, Vimeo

Blackberry Storms: MP4

Nokia S60+: MP4
